

Sector flavour: School

Drop-in replacements for the sector-neutral master. Everything else in the template stays the same.

Note: this flavour is the entry-level, self-serve version for schools. Schools needing a full, board-adoptable framework (9-part, NZQA / MoE aligned, age-banded student use, academic integrity, procurement) should use the Schools Governance engagement — see nathanielbaldock.com/schools/governance.

"The people we serve"

→ **our students, families, and staff**

Leadership body

→ **the Board of Trustees / Senior Leadership Team**

Why this policy exists (reference draft)

AI has already entered every school — students write and research with it, teachers plan and communicate with it, administrators report with it. Without shared guidelines this creates risk for students, staff, and the school itself. This policy gives everyone the same clear expectations and protects the people in our care.

Extra conviction framing

Add a conviction: **Academic integrity and formation.** Learning is the goal. AI assistance must be disclosed, and misrepresenting AI-generated work as one's own is not permitted. We are forming habits of mind, not just producing outputs.

Welcome (add)

Lesson planning, differentiation, rubric drafting, and administrative efficiency — where tools are approved and no student personal data is entered.

Red-list examples (What we do not do / Privacy)

Student names and records, grades and assessment data, IEPs and learning-support documentation, behavioural / counselling / wellbeing notes, staff HR files, family personal information.

Charity note

Not applicable.

Suggested leader roles for adoption block

Principal / Head of School · Board Chair
