

# Sector flavour: Church

---

*Drop-in replacements for the sector-neutral master. Everything else in the template stays the same.*

## "The people we serve"

→ our congregation and community

## Leadership body

→ the Senior Leadership Team / eldership

## Why this policy exists (reference draft)

Our calling has not changed: to love and serve the people God brings to us. AI is a tool that can help us with sermon prep, communications, and admin — but it cannot pray, intercede, listen for God's voice, or bear witness to Christ. This document makes our approach to AI visible, accountable, and grounded in who we are.

## Extra conviction framing

Add a first conviction (before the five): **The Holy Spirit is irreplaceable.** No AI tool can pray, intercede, provide pastoral care, or discern God's leading. AI can help with many things; it cannot do any of these.

**[YOU TO WRITE]** — this is your theology; write it in your own words.

## Welcome (add)

Sermon and teaching preparation — researching context, generating outlines, drafting illustrations — where the content is reviewed, tested against Scripture, and carried with personal integrity by the preacher.

## Red-list examples (What we do not do / Privacy)

Prayer requests, pastoral care notes, counselling records, safeguarding information, personal circumstances, giving/financial information, children's/youth ministry information —

anything shared in confidence.

## Absolute boundary — confidential prayer/ministry

Add this as a hard line beyond the Traffic Light categories:

Information shared in [**confidential prayer / freedom / inner-healing ministry**] sessions and retreats is among the most sensitive we hold. It must never enter any AI tool — public **or** enterprise. This is not a guideline. It is an absolute boundary.

## Public vs Secure (Enterprise) tools

Churches often have both a free consumer account and a managed one. Make the distinction explicit so Amber-category work has a safe home: - **Public AI tools** — free consumer ChatGPT / Claude etc. that may train on what you type. Assume anything typed here could become public. **Green-category tasks only.** - **Secure (enterprise) sandbox** — a church-managed account such as Google Workspace / **Gemini for Nonprofits**, with zero-retention or private-data terms. Your work stays in-house and is not used to train the model. **Approved for Amber-category tasks.**

## Māori data sovereignty (add to Privacy)

Recognise that for Māori whānau, personal information is taonga — its use subject to tino rangatiratanga and kaitiakitanga (aligned with Te Mana Raraunga principles).

## Website statements — church wording

When using `05-website-ai-statements.md`, church-specific fills for the brackets: - "the people we serve" → *our congregation and community / our whānau* - sensitive categories → *prayer requests, pastoral care notes, [confidential prayer] information, giving records, and information about children in our kids and youth programmes* - the human heart of our work → *pastoral care, prayer, preaching, and relationship* - mission line → *[your church mission statement]*

## Charity note

✅ **Include:** *Registered charities and not-for-profits: an adjusted rate applies. Mention your registration number when you book and it will be confirmed in your proposal.*

## Suggested leader roles for adoption block

Senior Pastor · Warden / Church Leader
